Prasun Nandi

Software Engineer — Generative AI Developer — Full Stack Developer

prasunnandi18@gmail.com +91 8240525276 github.com/Prasunnandi linkedin.com/in/prasunnandi-16-

Summary

Recent B.Tech Computer Science and Business Systems graduate with a solid foundation in Software Engineering, Machine Learning, and Generative AI. I have built several hands-on projects involving Multi-Agent Systems, data analytics, and RESTful APIs. Enthusiastic and adaptable, I am looking for an entry-level software engineering role where I can apply my programming skills, solve real-world challenges, and learn from a professional team. Actively expanding my skillset by mastering modern Java backend architectures, microservices, cloud technologies, and LLM security frameworks.

Technical Skills

Languages: Python, Java, SQL, JavaScript
Generative AI: RAG, LangChain, Prompt Engineering, AI Agents, LLM Applications, Spring AI
AI/ML: Scikit-Learn, Pandas, NumPy, Keras (Basic), ML,DL NLP, Model Evaluation
Backend: Spring (Boot, MVC, Security, Data), Microservices,Maven, Hibernate, REST, Node.js
Frontend: HTML, CSS, JavaScript
DevOps & Cloud: Docker, Kubernetes (AWS EKS), Jenkins (CI/CD), AWS ,Git, GitHub
Databases: MySQL, MongoDB, Vector Databases (ChromaDB)
Data Analytics: Matplotlib, Seaborn, Jupyter Notebook
Core CS: DSA, OOP, DBMS, OS, Computer Networks
Tools: VS Code, Postman, Cursor AI, JUnit5, Log4J

Education

Techno India University, Kolkata 2022 – 2026
B.Tech in Computer Science and Business Systems

St. Stephen's School 2020 – 2022
Higher Secondary (Science)

Projects

Agentic-RAG: Autonomous Multimedia Processing & Research Orchestrator (Python, LangChain, Whisper, ChromaDB)
Engineered an autonomous AI pipeline that transcribes video content using Whisper AI and orchestrates a team of LangChain agents to perform deep web research. Integrated Tavily API for real-time data fetching and implemented a Map-Reduce summarization chain to extract action items, key decisions, and generate fact-checked reports based on multimedia context.

Customer Segmentation using Data Mining Techniques (Python, Pandas, Scikit-Learn, K-Means)
Developed a customer segmentation system using data mining and machine learning techniques to identify distinct customer groups based on purchasing behavior. Performed data preprocessing, exploratory data analysis, feature selection, and clustering using K-Means. Evaluated cluster quality using silhouette scores and visualized insights to support data-driven business decision-making.

AI-Powered Code Review Assistant (Python, Node.js, MistralAI, HTML, CSS, JS)
Architected a web-based code review assistant to automate pull request analysis using LLMs. Built a Node.js backend integrating GitHub APIs for real-time diff extraction. Optimized LLM prompts to ensure accurate, context-aware feedback, accelerating the software development lifecycle.

Certifications & Professional Development

- AI for Real-World Applications AI4ICPS (IIT Kharagpur)
- Currently exploring advanced LLM security and governance by developing independent projects: **PrivacyGuard LLM**, **ShieldLLM**, and **SecureGuard AI**.
- Actively learning Generative AI, Agentic Systems, MCP, and modern AI application development.
- Completed comprehensive training in Java Backend Development, mastering Advanced Spring Boot, Microservices, Spring Security, Docker, Kubernetes (Amazon EKS), and Jenkins CI/CD.
- Building personal projects using Python, LangChain, Streamlit UI, and Vector Databases.
- Using AI-assisted development tools including Cursor AI and Claude Code to accelerate development workflows.

Languages: English, Hindi, Bengali **Interests:** Generative AI, Open-Source, Data Science, Competitive Programming
